

# DC/DC Converter

## URF1D\_HB-150W(H)R3(A5) Series

# MORNSUN®

150W isolated DC-DC converter  
Ultra-wide input and regulated single output

### FEATURES

- Ultra-wide input voltage range: 43-160VDC
- High efficiency up to 90%
- Low no-load power consumption
- Reinforced insulation, input - output isolation test voltage: 3k VAC, input - case isolation test voltage: 2.1k VAC
- Operating ambient temperature range: -40°C to +105°C
- Input under-voltage protection, output short-circuit, over-current, over-voltage, over-temperature protection
- Industry standard 1/2 brick
- EN50155 approved

URF1D\_HB-150W(H)R3(A5) series is a high-performance product specifically designed for a variety of railway applications. The DC-DC converters feature up to 150W output power with no requirement for minimum load, ultra-wide input voltage from 43-160VDC. The products also provide input under-voltage protection, output over-voltage, short-circuit and over-temperature protection. Additional functions include remote On/Off control, remote sense compensation and output voltage trim adjustment. EN50155 approved and they are widely used in railway systems and associated equipment.

Note: ① Use "H" suffix for heat sink mounting, "A5" suffix for chassis mounting. We recommend to choose modules with a heat sink for enhanced heat dissipation and applications with extreme temperature requirements;  
② Exceeding the maximum input voltage may cause permanent damage.  
③ The minimum input voltage and starting voltage of A5 Model are 1VDC higher than those of horizontal package due to input reverse polarity protection function.  
④ Efficiencies for A5 Model's is decreased by 2% due to the input reverse polarity protection function.

Typical Characteristic Curves

Notes:  
1. Temperature derating curves and efficiency curves are typical test values.

Remote Sense Application

1. Remote Sense Connection if not used

Notes:

- (1) If the sense function is not used for remote regulation the user must connect the +Sense to + Vo and -Sense to 0V at the DC-DC converter pins and will compensate for voltage drop across pins only.
- (2) The connections between Sense lines and their respective power lines must be kept as short as possible, otherwise they may be picking up noise, interference and/or causing unstable operation of the power module.

2. Remote Sense Connection used for Compensation

Notes:

- (1) Using remote sense with long wires may cause unstable output, please contact technical support if long wires must be used.
- (2) PCB-tracks or cables/wires for Remote Sense must be kept as short as possible. Twisted pair or shielded wairs are suggested for remote compensation and must be kept as short as possible.
- (3) We recommend using adequate cross section for PCB-track layout and/or cables to connect the power supply module to the load in order to keep the voltage drop below 0.3V and to make sure the power supply's output voltage remains within the specified range.
- (4) Note that large wire impedance may cause oscillation of the output voltage and/or increased ripple. Consult technical support or factory for further advice of sense operation.

Design Reference

1. Ripple & Noise

All the DC-DC converters of this series are tested before delivery using the recommended circuit shown in Fig. 1.

Fig. 1

Capacitors value	C0(μF)	C1(μF)	C2(μF)	C3(μF)
Output voltage				
5VDC	100μF/200V	1μF/16V	10μF/16V	330μF/16V
12VDC		1μF/25V	10μF/25V	330μF/25V
15VDC		1μF/25V	10μF/25V	330μF/25V
24VDC		1μF/50V	10μF/50V	330μF/50V
48VDC		1μF/100V	10μF/100V	330μF/100V

Note: A5 package does not need C0 capacitor.

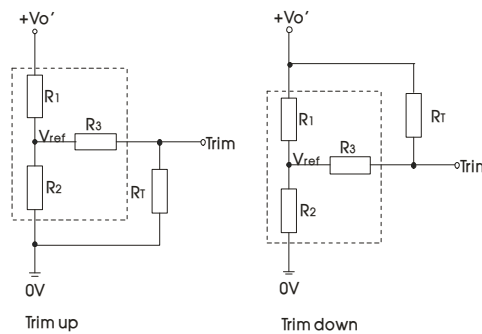

2. Typical application

We recommended using Mornsun's EMC circuit, otherwise please ensure that at least a 100µF electrolytic capacitors is connected at the input in order to ensure adequate voltage surge suppression and protection. Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values Cin and Cout and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

capacitor value Output Voltage	Cin(µF)	Cout(µF)
5VDC	100µF/200V	330µF/16V
12VDC		330µF/25V
15VDC		330µF/25V
24VDC		330µF/50V
48VDC		330µF/100V

3. Trim Function for Output Voltage Adjustment (open if unused)

TRIM resistor connection (dashed line shows internal resistor network)

Trim resistor calculation:

$$\begin{aligned} \text{up: } R_T &= \frac{\alpha R_2}{R_2 - \alpha} - R_3 & \alpha &= \frac{V_{ref}}{V_{o'} - V_{ref}} \cdot R_1 \\ \text{down: } R_T &= \frac{\alpha R_1}{R_1 - \alpha} - R_3 & \alpha &= \frac{V_{o'} - V_{ref}}{V_{ref}} \cdot R_2 \end{aligned}$$

  2. Recommend to use module with more than 5% load, if not, the ripple of the product may exceeds the specification, but does not affect the reliability of the product;
  3. The maximum capacitive load offered were tested at input voltage range and full load;
  4. It is suggested to take our recommended circuit for EMC testing. If the customer needs to meet the performance of the surge and without taking recommended solution of ours, please make sure the residual voltage of surge less than 180V;
  5. It is suggested that customers use enamel film or thermal grease between the heat sink and the module when using the heat sink to ensure good heat dissipation;
  6. Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25°C, humidity<75%RH with nominal input voltage and rated output load;
  7. All index testing methods in this datasheet are based on company corporate standards;
  8. We can provide customized and matched filter modules. For details, please contact our technical staff;
  9. Products are related to laws and regulations: see "Features" and "EMC";
  10. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
